FOR IMMEDIATE RELEASE

**CACE Technologies and MetaGeek Announce WiFi Pilot™**

Complete, portable 802.11 WLAN Analysis Solution with Spectrum Analysis for under \$700

Davis, California, May 5, 2009 – CACE Technologies, Inc., developer of tools to enhance the Wireshark user experience and MetaGeek, a developer of tools that help people visualize their wireless environment, today announce the release of WiFi Pilot, a complete WLAN Analysis Solution based on the popular CACE Pilot high-level analyzer, AirPcap WLAN adapter, and Wi-Spy, a USB-based spectrum analyzer that allows you to troubleshoot WLAN interference quickly and easily for a fraction of the cost of other solutions in this class.

CACE and MetaGeek set out to create a truly simple, graphical, complete tool at a price everyone can afford. According to John Bruno, CACE Technologies CEO, "We've put together a sophisticated bundle of tools that provides anyone needing to do wireless network security assessments, site surveys, WLAN troubleshooting, monitoring and management, a total solution. By combining the 802.11 capture capabilities of AirPcap, the spectrum-level visibility of Wi-Spy, the visualization, drill-down, and reporting features of CACE Pilot, and the vast protocol dissection capabilities of Wireshark, we think we're giving the market everything they need in 802.11 wireless analysis at an unbeatable price."

"We are really excited to be able to bring Wi-Spy to the market with the CACE Technologies products." opines Ryan Woodings, MetaGeek's Chief Geek. "We've been providing spectrum analysis at a breakthrough price for years, but now we can be part of a solution that includes proven products that will serve the needs of a broader market segment."

WiFi Pilot Bundle Components**AirPcap 802.11 WLAN Adapter**

WiFi Pilot works exclusively with the AirPcap Family of WLAN packet capture adapters under Windows. AirPcap adapters are USB-based and capture full 802.11 data, management, and control frames. They range from an 802.11b/g capture-only adapter to an 802.11a/b/g/n capture and injection adapter with two external MC-Card connectors for optional antennas

The integration with AirPcap adapters makes WiFi Pilot the only product to offer full multi-channel packet capture from a laptop-based system. WiFi Pilot, combined with either an AirPcap Ex or AirPcap Nx adapter, can also inject frames into your network to speed up WPA and WPA2 decryption, assuring more effective data analysis and troubleshooting for wireless networks.

Wi-Spy

The WiFi Pilot Bundle includes either [Wi-Spy v1](#) (802.11b/g, Chanalyzer 2.1), [Wi-Spy 2.4x](#) (802.11b/g, external antenna, Chanalyzer 3.2), or [Wi-Spy DBx](#) (802.11a/b/g/n, external antenna, Chanalyzer 3.2). With Wi-Spy you can:

- Easily find the open channel and minimize interference when installing, maintaining, or troubleshooting 802.11 networks
- Correlate 802.11 traffic quality from both the spectrum (using Wi-Spy) and the data (using AirPcap) points of [view](#)
- Readily track down interference from problematic devices
- Discover competing access points
- Simplify site surveys

WiFi Pilot Application

The WiFi Pilot analyzer is the core of the WiFi Pilot Bundle. A wireless-only subset of the popular CACE Pilot network analysis, visualization, and reporting tool, WiFi Pilot provides the same rich UI with all of the display, drill-down and reporting features, but with an 802.11, MAC-level-specific focus.

Wireshark Integration

WiFi Pilot and the AirPcap adapters are fully integrated with [Wireshark](#), allowing you to leverage the world's most widely-deployed network analyzer. WiFi Pilot makes it possible to select a wireless traffic source and view it with Wireshark. Using WiFi Pilot's Channel selection interface, you have complete control of your AirPcap adapters while capturing with Wireshark, and access to Wireshark's prodigious dissector library for deep 802.11 packet analysis and the corresponding display filters.

WiFi Pilot Pricing and Availability

WiFi Pilot bundle solutions start at \$665.00 USD and are available now exclusively from www.cacotech.com/products/catalog/. Please contact info@cacotech.com for more information.

About CACE Technologies, Inc.

Founded in 2005 with the vision of offering superior tools to the networking community, CACE Technologies, Inc. has since become a leader in the network analysis industry. Our innovative product portfolio includes the AirPcap family of wireless packet capture adapters for Windows, the TurboCap™ full-rate dual-port Gigabit Ethernet capture and injection solution, and CACE Pilot™, a powerful and intuitive network analysis, visualization and reporting tool. CACE also provides support and development for two of the most popular and highly acclaimed open-source networking tools: WinPcap and Wireshark. All of CACE' products are fully integrated with Wireshark and are designed to enhance the Wireshark user experience. For information on our tools and services, visit www.cacotech.com.
